DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

The primary reason for allowance of claims 27 and 46 is the newly added limitation of obtaining a number of beats using a high pass filtering process. This high pass filtering process allows for the beats, which are a low frequency component, to be found. Normally a high pass filter is used to pass only high frequency while disregarding the low frequencies, however, the high pass filter of the applicant's invention realizes the high pass filter through a convolution operation. The closest prior art references teach of the beats being a low frequency component of the image data, however, the prior art references do not teach of obtaining the number of beats using a high pass filtering process. The prior art references actually use a low pass filter to filter the signals thus obtaining the low frequency component, which the applicant actually teaches of not using since a low pass filter would reduce the beat component as well as the high frequency component of the sampled data. Therefore, the prior art reference clearly do not teach of obtaining a number of beats, the beats being a low frequency component of the image data, using a high pass filtering process.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen G. Sherman whose telephone number is (571) 272-2941. The examiner can normally be reached on M-F, 8:00 a.m. - 4:30 p.m..
